

Project Requirement - Corporate Resume Generator

A company has 100 employees. Now if you ask each employee to generate a resume then each one will have different format and style etc. This will be a problem for HR. Also, most employees are busy creating their resumes.

Now, you need to help HR by building the software which will help the HR team to automatically create employees' resumes based on various details filled by the employees themselves.

E.g. of resume:

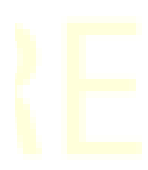

https://docs.google.com/document/d/1U_bj2gMfWVrmX9YBUab-rrBZzMmCnjuYwAPWjnpzZgs/edit?usp=sharing

Major Modules List:

- 6. Employee Details Module:** The user must be able to create, update, delete and view the list of all employees and employee details.
- Name**
 - Designation** (Dropdown and this values must come from database)
 - Professional Summary (This should contain pointers like the first section of the sample resume).
 - Coding** (Dropdown and these values must come from the database. Multi select must be allowed)
 - Tools** (Dropdown and these values must come from the database. Multi select must be allowed)
 - Employee Status:** Current/Ex

- g. Other fields whatever is necessary according to you.

6.1 Mapping of Project to Employee:

- In the employee list page, there should be an option to Add projects against each employee and on click of it, i should be able to see a page with all projects in dropdown and i should be able to select any project that i am currently working or worked in the past.
- This project will be mapped to that employee.
- One employee can have multiple projects.
- Same project can be mapped to multiple employees.

6.2 Resume Module

- h. In the employee list page, against each row the user should have one option named download with an option of PDF. The format must be the same as a shared sample.

7. Tools Module

- a. List page to display all the coding items one below other with option to create, edit and Delete of each item

8. Coding Module

- a. List page to display all the coding items one below other with option to create, edit and Delete of each item

Few important things to note:

1. There can be multiple users using the application.
2. All the modules must have audit fields (created date, created by, modified date and modified by).
3. All projects in the resume must be as per descending order (i.e. the recent one must come as first).
4. No hard delete. Everything must be soft delete (i.e. in database, flag must be set to decide if its inactive or active)
5. You need to perform unit testing as well as write test cases for each module.
6. The watermark need not come in the background.
7. You need to give the option to download both in word and pdf format.

Tech Stack to be used:

- Backend: **Python Django**
- Front end: **HTML, CSS AND JS**
- Database: **MySQL**
- Deployment: **You can use any free server like <https://vercel.com/>**
